

## Impacting the lives in the communities we operate

### Education

Many meritorious, underprivileged students drop-out from formal education system due to varied reasons including lack of financial support. To bridge the learning gap and contribute to skill development we promote education by **extending scholarships to enable and augment some of the meritorious, underprivileged students pursuing 4-year Bachelor of Dental Surgery (BDS) course.**

### Healthcare

**Raising awareness about oral health as an indicator for overall wellbeing**

There is an increased need for interventions to alleviate prevalence of oral disease burden of the country. Recognising these disparities amongst underserved communities, we bring dental care to their doorstep through **mobile dental vans.**

Life can be challenging for children born with a cleft lip or palate. Besides social stigma, without the corrective surgery the child faces difficulty in eating, breathing, speaking, and hearing. Therefore, to alleviate the cleft burden for India, we aim to transform the lives of children by giving them the power of a smile by offering **100%-free, quality, and safe cleft treatment.**

## Enabling primary healthcare services to the community we operate in

In a bid to tackle barriers in everyday health and bring a positive change in the society and deliver quality healthcare services for all, we provide **free primary healthcare mobile vans** to the underprivileged communities and provide quality services at the grassroots to ensure healthcare.

## Environment

In our endeavour to help break down barriers to better everyday health, we are focused on reducing our environmental impact, tackling toxicity in air, and maintaining cleaner air. We aim to cut carbon emissions by supporting to **recreate an urban forest using the Miyawaki technique** and lessen exposure of communities from pollution levels.
